

Good Business

A premium clean business template

Created: August 7, 2009

By: Joefrey Mahusay

Email: joefrey.mahusay@gmail.com

Thank you for purchasing my theme. If you have any questions that are beyond the scope of this file, please feel free to email via my user page contact form [here](#). Thanks so much!

Table of Contents

- A. Features
- B. HTML Structures
- C. CSS Files and Structure
- D. Javascript
- E. PSD Files
- F. Sources and Credits
- G. PHP Code Explanation

A. Features

- Valid XHTML Strict 1.0
- Valid CSS 2.1
- Table Less Layout
- Tested and working in all major browsers
- 3 Color Variations (default, blue, green)
- 1 PSD included
- 1 PDF Help File
- Functional Contact Form
- Lightweight File

B. HTML Structures

This theme is a fixed layout with two option column; you can apply either one or two columns to the document/page. All of the information within the main content area is nested within a div with an id of "content". The sidebar's (column #2) content is within a div with an id of "sidebar".

The general template structure is the same throughout the template. Here is the general structure.

The image below shows the **one column layout** with three sub columns.

```
106
107
108
109 <div id="main_content_inner">
110 <!--start main_content -->
111 <div id="main_content">
112
113     <div class="section_column3">
114
115         <div class="first">
116             <h3>Who are we?</h3>
117             <span class="intro_text">Pellentesque habitant morbi tristique</span>
118             
119             <p>Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Vest:
120 quam, feugiat vitae, ultricies eget, tempor sit amet, ante. Donec eu libero sit amet quam egestas semper. Aenean ultr:
121 est. Mauris placerat eleifend leo. </p>
122             <p>Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Vest:
123 quam, feugiat vitae, ultricies eget, tempor sit amet, ante.</p>
124             <div class="link_btn"><a href="#"><span></span>Read More</a></div>
125         </div>
126     </div>
127     <div class="second">
128         <h3>What do we do?</h3>
129         <span class="intro_text">Pellentesque habitant morbi tristique</span>
130         
131         <p>Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Vest:
132 quam, feugiat vitae, ultricies eget, tempor sit amet, ante. Donec eu libero sit amet quam egestas semper. Aenean ultr:
133 est. Mauris placerat eleifend leo. </p>
134     </div>
135 </div>
136 </div>
137 </div>
```

The image below shows the **two column layout**. Inside the content there's also a breadcrumb section.

```
57 <div id="main_content" class="two_column">
58
59 <!--start content -->
60 <div id="content">
61     <div class="breadcrumb_inner">
62         <ul class="breadcrumb">
63             <li class="first"><a href="index.html">Home</a></li>
64             <li><a href="about.html">About</a></li>
65             <li class="current">What makes us different</li>
66         </ul>
67     </div>
68 </div>
69 <!--end content -->
70
71 <!--start sidebar -->
72 <div id="sidebar">
73
74     <div class="box">
75         <ul class="sidenav">
76             <li><a href="#">The company</a></li>
77             <li><a href="#" class="current">What make:
78 </li>
79             <li><a href="#">The Staffs</a></li>
80         </ul>
81     </div>
82 </div>
83 <!--end sidebar -->
```

If you would like to edit the color of **<a>** tag, you would do the following:

```
a, a:link{
  color:#7caeab;
  text-decoration:none;
}
a:hover{
  color:#7caeab;
  text-decoration:underline;
}
```

If you would like to edit the font face and line-height of the document, you would do the following:

```
body#home{

  font:13px/18px Arial, Helvetica, sans-serif;

}
```

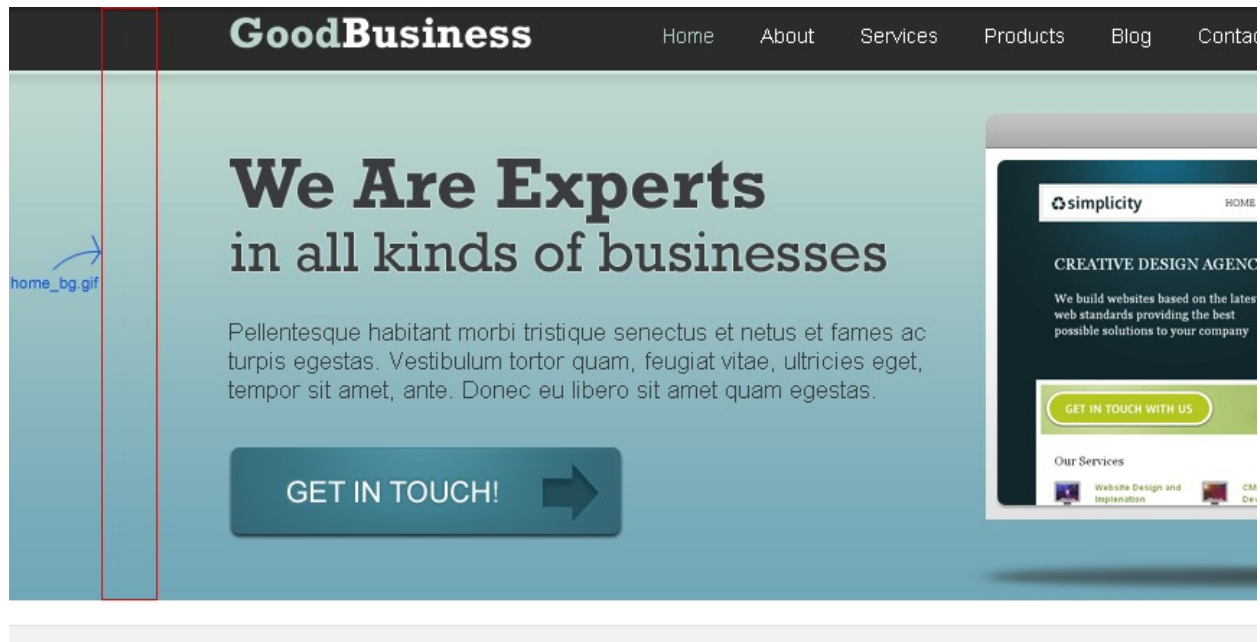

You've noticed in the document particularly in the body tag has an id of **#home** it's because of the background purposes, the background image of the homepage is not the same with the background image of the inside pages. See the below CSS code

```
body#home{

  background:#fff url(../images/home_bg.gif) repeat-x;

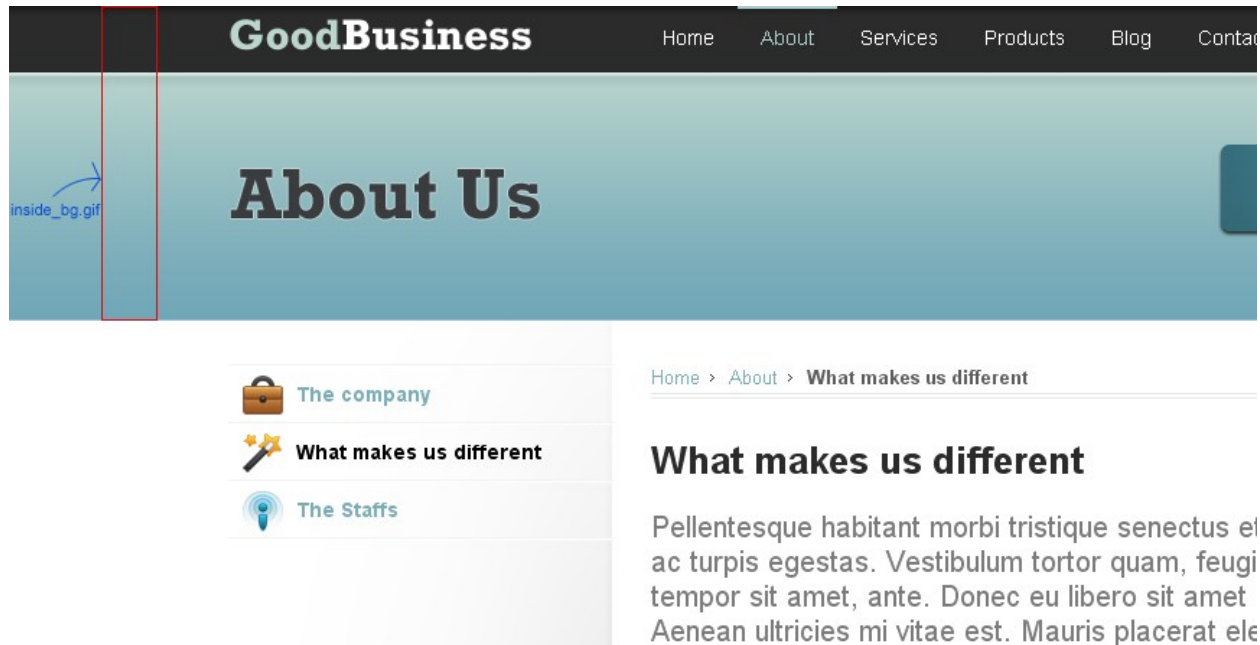

}
```

See below image:

```
body#inside_page{  
    background:#fff url(../images/inside_bg.gif) repeat-x;  
}
```

See below image

The HTML code below shows the body tag with an id of home and inside_page

This is for homepage

```
<body id="home">
```

This is for the inside pages like, about, services, products, blog, contact

```
<body id="inside_page">
```

So, to ensure that your new styles are applied, make sure that they carry enough "weight" and that there isn't a style lower in the CSS file that is being applied after yours.

C. CSS File and Structure

I'm using two CSS files in this theme. The first one is a generic reset file. Many browsers interpret the default behavior of html elements differently. By using a general reset CSS file, we can work round this.

The CSS Files

The below CSS file can be found in the **css** folder

- Reset.css
- Style.css

If you would like to edit a specific section of the site, simply find the appropriate label in the CSS file, and then scroll down until you find the appropriate style that needs to be edited.

Any images that are placed within the document/page have 20px worth of margin either left alignment or right alignment and the bottom margin have worth of 10px, find the following section in the style sheet:

See the below code.

```
#main_content img.alignright {
    display: inline;
    margin:0 0 10px 20px;
}
#main_content img.alignleft {
    display: inline;
    margin:0 20px 10px 0px;
}
```

Belo is the link button css code

```
/*normal read more*/
.link_btn a{
    float: left;
    width:auto;
    text-decoration: none;
    padding:5px 30px 0 0;
    height:23px;
    margin-right: 2px;
    font-size:13px;
    color: #5c5c5c;
    background: url(../images/link_btn_bg.gif) no-repeat top right;
}
```

```
.link_btn a span {
    width:auto;
    float: left;
    padding-right: 12px;
    display: block;
    margin-top:-5px;
    height: 28px;
    background: url(../images/link_btn_bg.gif) no-repeat top left;
}
.link_btn a:hover {
    color:#262626;
    background-position:right 100%;
    text-decoration:none;
}
.link_btn a:hover span {
    background-position:left 100%;
}
```

You can use this to the html by doing so;
HTML Code:

```
<div class="link_btn"><a href="#"><span></span>View Service Details</a></div>
```

See the below image of a link button; **View Service Details**

Service Title

Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Vestibulum tortor quam, feugiat vitae, ultricies eget, tempor sit amet, ante. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Vestibulum tortor quam, feugiat vitae, ultricies eget, tempor sit amet, ante. Donec eu libero sit amet quam egestas semper. Aenean ultricies mi vitae est. Mauris placerat eleifend leo.

View Service Details →

C. JavaScript

This theme imports 1 Javascript file.

The below import code can be found in the <head> tag section of the document

```
<script src="js/unitpngfix.js" type="text/javascript"></script>
```

- The purpose of the **unitpngfix.js** is to fix the IE6 PNG transparency.
- The **unitpngfix.js** can be found in the **js** folder
- You don't need to edit this file.

D. PSD Files

I've included 1 psd file for the whole layout.

- layout.psd
- This can be found in **psd** folder

E. Sources and Credits

I've used the following images, icons, and fonts

- Images - http://themeforest.net/page/asset_library
- Icons – <http://wefunction.com> , <http://www.icojoy.com/articles/46/> and <http://www.iconeden.com/>
- Rockwell Font (Commercial) - <http://new.myfonts.com/fonts/linotype/rockwell-mt-2/>
- I've used Arial font to this theme.

E. PHP Code Explanation

I've used php code in the contact form in order to send a message.

Note: The bold texts are needed to change.

Find the below php code and change the joefrey.mahusay@gmail.com to you own email address.

\$to = "**joefrey.mahusay@gmail.com**";

You could change this subject of what subject appeared in your email inbox.

\$subject = \$subject." - **A message from Good Business**";

Once again, thank you so much for purchasing this theme. As I said at the beginning, I'd be glad to help you if you have any questions relating to this theme. No guarantees, but I'll do my best to assist. If you have a more general question relating to the themes on ThemeForest, you might consider visiting the forums and asking your question in the "Item Discussion" section.

Enjoy!

Joefrey Mahusay
